In class we will examine the science of Environmental Impact Assessment (EIA) and the application of the National Environmental Policy Act (NEPA) to government and private sector projects. Topics to be covered include: scope of analysis, impact indicators, thresholds, tools to identify potential impacts, and assessment techniques. This is an applied course that will use real-world examples and allow students to develop a keen understanding of the issues, trade-offs, and benefits of various assessment techniques.

The instructor for this course is Tom Hale. He has taught many courses on natural resources issues and environmental planning. He has over 24 years of experience with three federal land use management agencies, a local conservation group, and as an environmental consultant.

If you have any questions regarding course content, please contact Tom at 801-560-5356 or thale@ene.com.
