Summer 2014: GEOG 1100
Exploring the World Through Google Earth
Tuesday and Thursday, 1:00 PM - 4:00 PM

This course uses Google Earth as a tool to investigate important geographic processes that are responsible for global change phenomena. Self-guided labs will use Google Earth to analyze datasets related to physical and human geography. This is a great class for anyone interested in environmental issues, environmental changes at regional and global scales, and interactions between humans and the environment. This class fulfills the physical/life science exploration (SF) requirement.
